August 2017

Recently, the New Jersey Department of Education put forth a rule requiring all public schools to test for lead content at all point sources for water used for drinking or cooking purposes prior to July 31<sup>st</sup>, 2017. Schools of the Diocese of Trenton are not required to do the testing, however, as this is in the best interests of our students, we have continued to test all schools previously not tested in 2016. The Diocese has contracted with LECO Laboratory, a NJ certified analytical testing laboratory to analyze for lead contamination at all Diocesan school facilities.

The selected sample sites included all drinking fountains, kitchen sinks, water sources for ice making machines, and any source of water used for cooking and food preparation at St. Peter School in Point Pleasant. The test results were received on August 9, 2017. Of the thirteen sampled locations all met the lead action limit (lead, 15 parts per billion).

Lead content from all other sources of water for cooking, drinking or ice were measured below the recommended action limit or not detected. The complete test report is available for viewing on-line or at the school business office by appointment during school business hours.

***Respect\*Reverence\*Responsibility***

***In accordance with our Catholic Identity and rooted in Gospel values, it is the mission of Saint Peter School to provide a community of faith in which students will develop spiritually, intellectually, physically, socially and emotionally.***
